Dear Denis, Anton and Jimmy,

I really enjoyed the warm, young and dynamic atmosphere at the Swissquote office on that sunny Thursday afternoon and particularly our constructive and open discussion at 4 p.m.

From our discussion, I understand that you need a business analyst working mainly with 3 different teams: Brokerage, SQX back-end, and Digital Assets Custody.
For large projects, such as extending SQX capabilities to source and trade STIR instruments, my main role (that I can start from day 1) is to liaise with different business departments to define the business scope and provide a shared view of business and user requirements.

By taking ownership of these tasks, Anton will have more time to focus on developing his team and addressing other critical issues, such as strengthening the Swissquote Market Making (SQMM) and expanding market connectivity (e.g., Bitstamp).

With humility, I strongly believe that I have the soft and the hard skills in liaising business expectations with technical teams thanks to my previous success stories of taking ownership in specifying, testing front-to-back solutions covering funds trading, FX Request for Quote and EUREX options market making.
On the technical side, I have proven experience in FIX/SWIFT protocol communication, familiar with Kafka streaming, REST API testing, Splunk log analysis and SQL queries handling.
Regarding communication with external parties, at Credit Suisse I had the opportunity to onboard new SWIFT clients (brokers and private banks) by preparing rules of engagement and testing end-to-end equities, fixed income, and funds orders.

Looking forward to joining your three teams, making an immediate impact, learning more about your digital assets/cryptos and taking quickly an end-to-end ownership for incremental and smooth deliveries.

I hope that you did not find my “thanks letter” a little bit too long 😉 ...
Wish you a restful weekend and a fresh start for the coming week.

Best Regards,

Joseph
